

BULLETIN 2020-03

Subject: Rule Changes – Production Class Rule Change Proposal regarding Launch Control and Anti-Lag

Issue Date: June 22, 2020

Effective Date: Immediate

Rationale for canceling the proposed rule change in the 2020-03 draft:

The CARS board received feedback from the 2-week review of the draft bulletin, that proposed allowing LC and ALS in P4WD Class, 80% of respondents were against the change. The board could not determine if this would also be the opinion of the impacted P4WD drivers, so sent a survey directly to those competitors. Those responses confirmed that approx. 80% would prefer to leave the rules as they are and not allow ALS or LC in P4WD cars.

Based upon the feedback received, the CARS board have decided to not change the rules and leave the rule as follows;

1. 12.7.6.2 ECU

The ECU is free. Launch control and Anti-Lag are permitted only if these features are available as OEM features.
